

# Extend your reach with the Figure #5069 AutoFit Valve

Solve your toughest installation issues with the Fig. # 5069 AutoFit valve. This unique valve offers installers the ability to adjust to different length openings in copper pipe. Save time and expense of soldering nipples or fittings on valves when retrofitting. The easy to use compression ends make installation a snap!

Slide the compression tail piece over the pipe end. Then install the valve body over the pipe end.

**1**

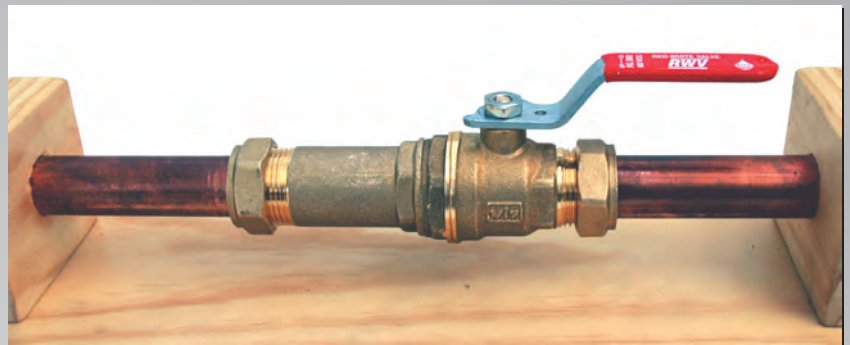

**2**

Slide the compression tail piece into the valve body and tighten.

Tighten the compression fittings and your done!

**3**

The Fig. #5069 valve is available in 1/2" through 1" sizes and features forged brass construction, PTFE seats, a blowout proof stem and is certified to NSF Standard 61.
